

Telepathy test standards

This document represents the inaugural comprehensive standard for assessing telepathy espers, meticulously crafted to evaluate both foundational and advanced telepathic abilities. It is the first fully analyzed framework for telepathy, encompassing all essential manipulation techniques required by telepathy espers. As research and experimentation advance, further updates to this standard may be necessary to ensure it remains at the forefront of telepathic evaluation. Notably, Mind Anaphylaxis is included as a key testing criterion, recognizing it as an advanced extension of telepathic capability. All subsequent tests will be rigorously designed in accordance with the protocols outlined in this document.
